

RemoSync Business Email

Access your corporate email on your handset

The RemoSync Client for regular cell phones (brew, java), Android, smart phones and tablets, offers employees the tools to stay more productive by doing business directly from their phones.

Using Microsoft® Exchange ActiveSync®, RemoSync connects devices directly to Microsoft Exchange servers (2003, 2007, and 2010), IBM Lotus Notes¹, Google Apps, Zimbra¹, and Hotmail¹ giving users real-time access to email, contacts, global address lists (GAL), and calendar. RemoSync is available for various AT&T quick messaging devices (QMD), and rugged phones.

Key Features

- Near real-time synchronization of email, calendar, and contacts.
- Quick access to global address lists.
- Integrated calendar and tasks management.
- Schedule or reply to meeting invites right from your phone.
- Personal email (POP3/IMAP4) support.
- View attachments (word, excel, ppt, PDF, jpeg, png, etc).
- Choice of synchronization options:
 - Direct Push: Your email and calendar are always up to date.
 - Scheduled synchronization: Receive your email, contacts, and calendar updates on a schedule that you choose.
 - Manual synchronization: Retrieve your email, contacts, and calendar updates when you really want them.
- Easy download and setup instructions.

Benefits

- Convenience:
 - Receive desktop functionality on your handheld device.
- Security:
 - Local and remote data wipe (2007 and 2010).
 - Password control:
 - Default security PIN
 - Alphanumeric password
 - Minimum password length
 - Maximum failed password attempts
 - Policy update refresh as soon as client connects to server.
 - Encrypted data files, email, contacts, calendar as part of application database. Files can't be copied to external drives.
 - Attachments enabled/disabled (2007 and 2010).
 - Data protection with SSL support.
- Cost savings:
 - Low monthly subscription.
 - No need for third-party servers, licenses, or other IT expenditures.

Notes: 1 Java phones do not support these features.
